

# Pathway analysis for genomics

Gary Bader  
Oct.23.2012 – FGED Toronto

**Donnelly Centre**  
for Cellular + Biomolecular Research

UNIVERSITY OF  
**TORONTO**

Pinto et al. Functional impact of global rare copy number variation in autism spectrum disorders. Nature. 2010 Jun 9.

# Correlation to Causation

- GWAS: find genetic markers correlated with disease – powerful approach, but:
  - genomics reduces statistical power (>multiple testing correction with >SNPs)
  - rare variants = more samples
- Associate pathways to increase power
  - Fewer pathways, organize many rare variants (damaging the system causes the disease)
- Use pathway knowledge to identify potential disease causes

## Complete Listing of All Pathguide Resources

Pathguide contains information about **222** biological pathway resources. Click on a link to go to the resource home page or 'Details' for a description page. Databases that are free and those supporting BioPAX, CellML, PSI-M... or SBML standards are respectively indicated.

If you know of a pathway resource that is not listed here, or have other questions or comments, please [send us an e-mail](#).

## Protein-Protein Interactions

Database Name (Order: alphabetically   <a href="#">by web popularity</a> )	Full Record	Availability	Standards
3DID - 3D interacting domains	<a href="#">Details</a>	Free	
ABCdb - Archaea and Bacteria ABC transporter database	<a href="#">Details</a>	Free	
AfCS - Alliance for Cellular Signaling Molecule Pages Database	<a href="#">Details</a>	Free	
AllFuse - Functional Associations of Proteins in Complete Genomes	<a href="#">Details</a>	Free	
ASEdb - Alanine Scanning Energetics Database	<a href="#">Details</a>	Free	
ASPD - Artificial Selected Proteins/Peptides Database	<a href="#">Details</a>	?	
BID - Binding Interface Database	<a href="#">Details</a>	Free	
BIND - Biomolecular Interaction Network Database	<a href="#">Details</a>	Free	PSI-MI
BindingDB - The Binding Database	<a href="#">Details</a>	Free	
BioGRID - General Repository for Interaction Datasets	<a href="#">Details</a>		PSI-MI
BRITE - Biomolecular Relations in Information Transmission and Expression	<a href="#">Details</a>	Free	
CA1Neuron - Pathways of the hippocampal CA1 neuron	<a href="#">Details</a>	Free	
Cancer Cell Map - The Cancer Cell Map	<a href="#">Details</a>	Free	BioPAX
CSP - Cytokine Signaling Pathway Database	<a href="#">Details</a>	Free	
CTDB - Calmodulin Target Database	<a href="#">Details</a>	Free	
DDIB - Database of Domain Interactions and Bindings	<a href="#">Details</a>	Free	
DIP - Database of Interacting Proteins	<a href="#">Details</a>		PSI-MI
Doodle - Database of oligomeri;			
DopaNet - DopaNet			
DRC - Database of Ribosomal (			
DSM - Dynamic Signaling Maps			
FIMM - Functional Molecular Im			
FusionDB - Prokaryote Gene Fu			

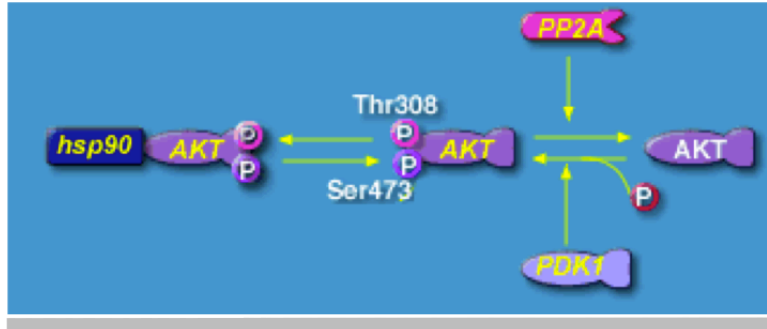

- Varied formats, representation, coverage
- Pathway data extremely difficult to combine and use

# BioPAX Pathway Language

- Represent:
  - Metabolic pathways
  - Signaling pathways
  - Protein-protein, molecular interactions
  - Gene regulatory pathways
  - Genetic interactions
- Community effort: pathway databases distribute pathway information in standard format

# Aim: Convenient Access to Pathway Information

<http://pathwaycommons.org>

Facilitate creation and communication of pathway data  
Aggregate pathway data in the public domain  
Provide easy access for pathway analysis

Long term: Converge  
to integrated cell map

# Pathway Commons: cPath<sup>2</sup>

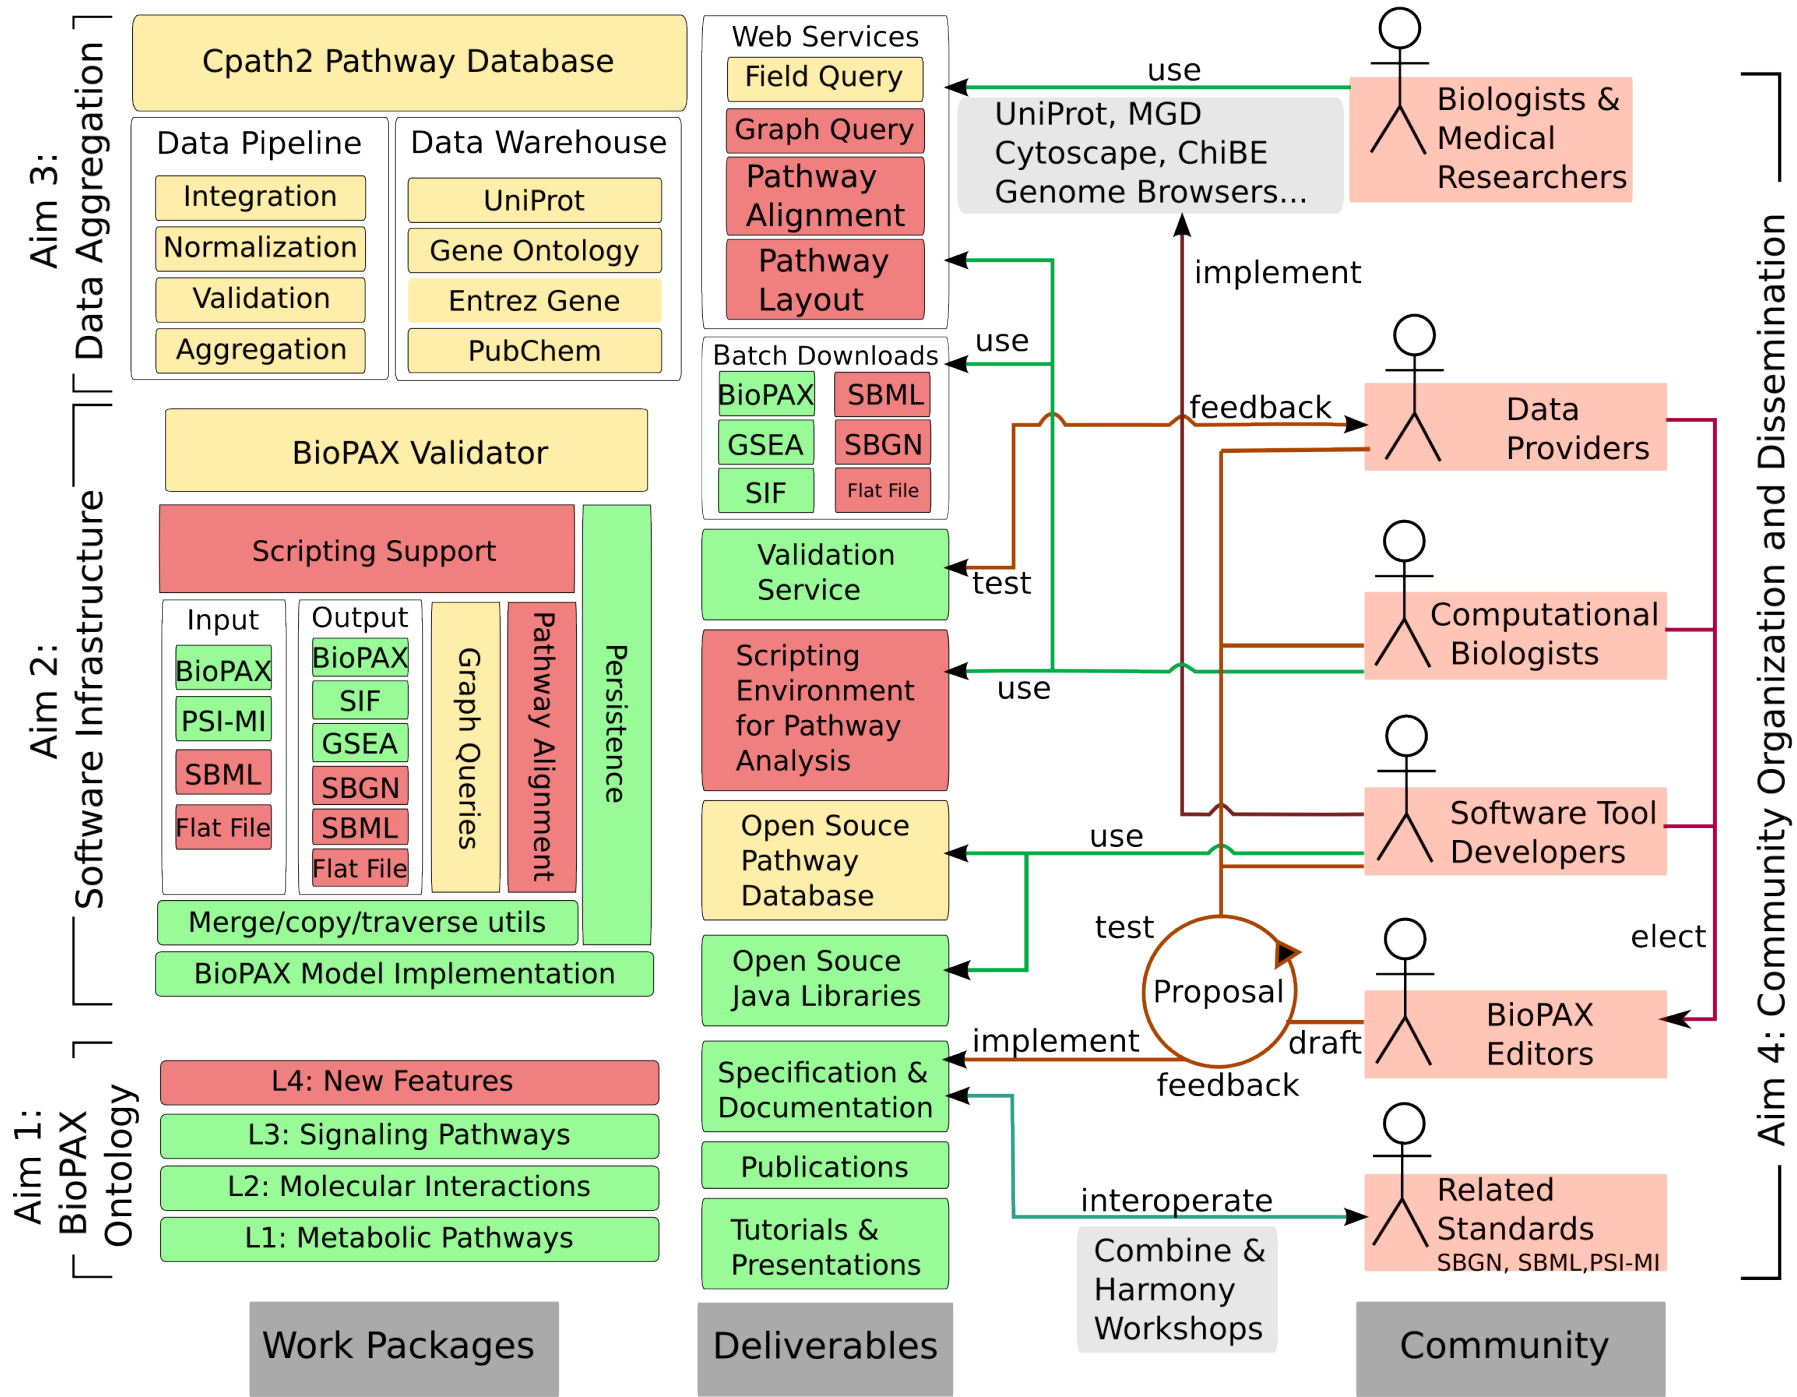

- <http://www.pathwaycommons.org/pc2/>

## **Web Service API:**

You can programmatically access the data within Pathway Commons using the Pathway Commons Web Service Application Programming Interface (API). This page provides a reference guide to help you get started.

Texas

Welcome to Cytoscape 2.4.0-b1

Right-click + drag to ZOOM

Middle-click + drag to PAN

# Cytoscape 3

- Complete re-architecture: OSGi – everything is an app
- Enables future features:
  - More stable and powerful APIs
  - Scripting, macros, recordable history, better undo/redo
  - Command line mode, good for use on compute clusters
  - Interactive control from other scripting languages e.g. R
- Fixing bugs and porting plugins
- 3.0 beta now available
  - Mirror functionality in 2.8
  - Encourage plugin to app porting
  - <http://www.cytoscape.org/cy3.html>

# NATIONAL RESOURCE FOR NETWORK BIOLOGY

## Mission Statement

The aim of the National Resource for Network Biology (NRNB) is to provide a freely available, open-source suite of software technology that broadly enables network-based visualization, analysis, and biomedical discovery for NIH-funded researchers. This software is enabling researchers to assemble large-scale biological data into models of networks and pathways and to use these networks to better understand how biological systems operate under normal conditions and how they fail in disease.

The National Resource for Network Biology is an NIH National Center for Research Resources (**NCRR**) Biomedical Technology Research Center (**BTRC**), organized around the following key components: Technology Research and Development, Driving Biomedical Projects, Outreach, Training and Dissemination of Tools. NRNB is funded by RR031228.

# The Factoid Project

- Publishing in science
  - Highly inefficient
  - Outdated technology, difficult to search and compute
- <http://www.elseviergrandchallenge.com/>
  - Winner: <http://reflect.ws/>
- Pathway and network information database curation
  - Highly inefficient
- The factoid project

# Pathway and Network Analysis

1. Gene set: pathway enrichment analysis
2. Network: network regions (modules), regulation
3. Process model: classical pathways
4. Simulation model: detailed models

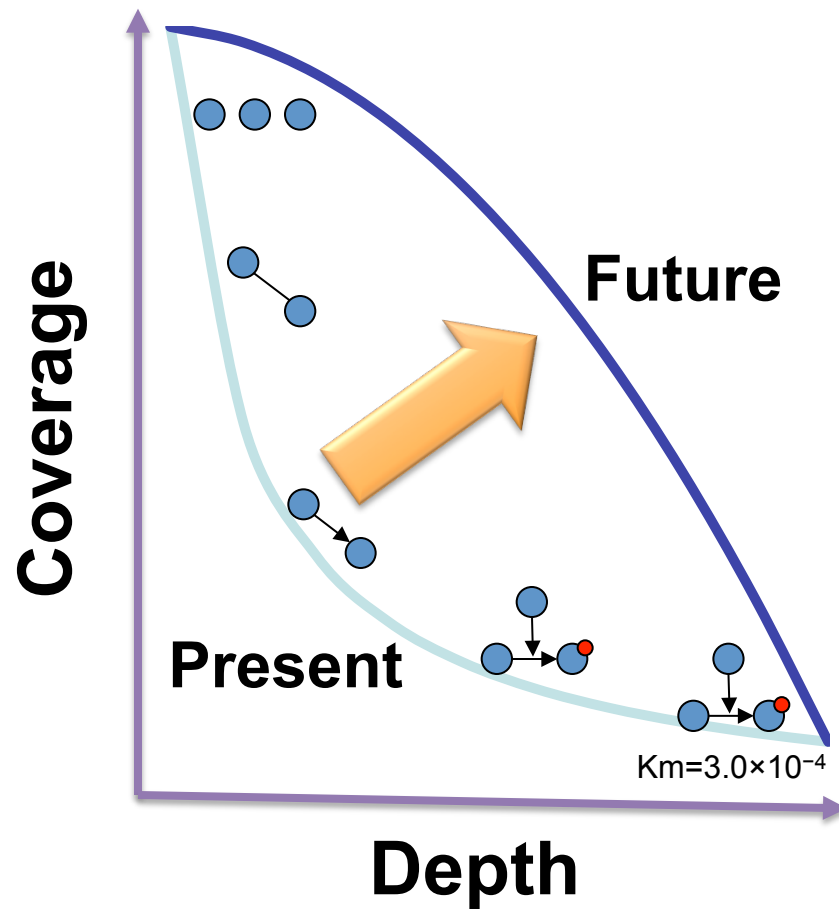

**Genome Coverage  
And use**

**Mechanistic  
Understanding**

# Increase Coverage and Depth

Data and analysis methods

## Cellular Process Representation

- Gene set
